# Playing/Using the Games: Sound Search

This document will go over how a student plays Sound Search

Sound Search is a sound identification game where students will match items on the left side of the screen to their matching sound on the right side.

The student will drag their finger down the left side of the screen, and we will play the various different items that they are touching. Once they find an item, they should move their finger to the right side of the screen and drag it down the right side. We will play the different sounds they are touching. Once they find the correct sound for that item on the left, they can lift their finger to match them. Students will try to match as many sounds as they can within the time limit.
